

'We guarantee the highest quality standards'

Experience in hospitals projects

Sacyr's experience in the construction, management and maintenance of hospitals guarantees the highest quality standards in its buildings, which are sustainable, efficient and accessible to users. With more than 60 hospitals and health centers built or renovated in Spain, Portugal, Peru, Chile, Mexico, Angola and Cape Verde with more than 9,000 beds and an investment of more than 3.2 billion euros.

Sacyr Concesiones: Hospital management

Sacyr Concesiones manages seven hospitals in Spain, Portugal and Chile, which adds up to 2,263 beds and which serve a population of around 3 million inhabitants. The newly opened Antofagasta hospital in Chile is the largest in the country with a total of 671 beds. In Mexico City Sacyr Concesiones is designing - for its subsequent construction, equipment and maintenance - the Regional Sur Hospital over 25 years, which will have 250 beds and will serve more than 1.3 million users. The constant improvement in the management of the hospital centers has earned Sacyr the EDP award for Electric Power and Environment for the Hospital de Braga (Portugal) energy efficiency project.

Valoriza Facilities: leader in non-health services

Valoriza Facilities is one of the leading companies in Spain in providing non-health services in hospitals and health centers such as cleaning, maintenance of facilities, energy services, catering and auxiliary services. With a backlog of 26 hospitals totaling almost 5,800 beds, 284 health and specialty centers. Additionally, it carries out the comprehensive management of non-health services in the hospitals of Sacyr Concesiones in Spain, Portugal and Chile, serving more than one million people. Sacyr's subsidiary was the first Spanish company to obtain the ISO 9001 and ISO 14001 certifications in the comprehensive management of non-health hospital services. It also has the OSHAS 18001: 2007 certificate and the UNE 166002 R&D+i Management System, among others

Antofagasta Hospital (Chile)

The design, construction and management of the Antofagasta Hospital in Chile are benchmarks of safety and innovation thanks to the built-in safety measures that make it the reference point for patient care throughout the northern area of Chile (800,000 users). In 2013 the improvements in its design won the "Healthcare Deal of the Year" prize, awarded by the British magazine "World Finance". Among the improvements, seismic isolation was incorporated throughout the hospital and building was carried at 30 m above sea-level — the safety level in the event of a tsunami — which would allow the hospital to operate autonomously in the event of natural disasters.
