

'20 years of Sacyr in Chile'

20 years of Sacyr in Chile

Sacyr has been in Chile now for 20 years. In 1996 it won the first contract to build and operate Los Vilos-La Serena highway, in early days of the Concessions System, a contracting modality or private sharing in the procurement of basic service infrastructures via a public-private partnership (PPP).

Since then it has invested close to 6.5 billion dollars in 13 concession projects totaling more than 1,300 kilometers of highway, as well as the construction of other hospital, hydraulic, mining infrastructures, buildings, etc.

Sacyr Concesiones

Sacyr Concesiones manages 680 km of highways in 4 road concessions with very high security standards for traffic and road safety. As well as 2 other highway projects in progress which amount to almost 100 kilometers (Américo

Vespucio Oriente and La Serena – Ovalle) and the Antofagasta hospital.

Sacyr Construcción

Over these 20 years of presence in Chile, Sacyr Construcción has executed 13 highway projects from Iquique to Puerto Montt, works of Santiago Centro Oriente, a hospital and the construction of over 1,300 km of highways, over 40% of the highways built in Chile since 1996.

Sacyr's commitment

Sacyr's commitment to Chile over these 20 years has been permanent and transversal through the provision of infrastructures, the development of which has brought growth, competitiveness and improved quality of life for its inhabitants.

All the above with a firm long term commitment. It also carries out important R&D&I projects such as the installation of a test section with recycled asphalt mixes, and the treatment of acid water in mining, as well as the upcoming creation of the Sacyr Awards for Innovation in Chile. To recognize this commitment, the president of Sacyr was presented in 2015 with the award of the Spanish Chamber of Commerce in Chile.

Antofagasta Hospital

The Hospital in Antofagasta will be one of the largest in the country with 671 beds (114,000 m2) benefiting a population of 260,000 people. Sacyr executed a safe and sustainable architectural Project which guarantees the operation of the hospital in the face of potential earthquakes and tidal waves, having designed the building above 30 water mark (the tsunami evacuation line) and the entire structure was built on seismic insulators.

The prestigious World Finance magazine names the hospital project as Deal of the Year in November 2013.
