SACYR MAINTENANCE CERTIFIES CARBON FOOTPRINT WITH AENOR

- **AENOR's system is based on the ISO 14064 standard, allowing the identification of specific activities or actions aimed at improving GHG management.**

Madrid, July 11, 2024.- Sacyr Maintenance has received its Carbon Footprint Certification from AENOR, guaranteeing an accurate, coherent, transparent measurement of Greenhouse Gases (GHG) according to ISO 14064-1:2018 standard. This certification demonstrates the company's commitment to minimizing carbon emissions, with a focus on reducing its carbon footprint.

Sacyr Maintenance **specializes in infrastructure conservation, operation, and maintenance.** It engages in high-value activities such as rehabilitation of structures, placement of containment systems, execution of road markings, and repair and maintenance of the fleet.

This AENOR certification considers **direct emissions from Sacyr's own sources, indirect emissions from purchased energy,** and even those from customers and suppliers.

This certification will help **manage the risks associated with greenhouse gas emissions** and identify opportunities for their reduction. Additionally, it facilitates the development and implementation of GHG management strategies and plans, including the creation of mandatory programs or participation in CO2 markets, and promotes early action against climate change.

Sacyr is one of the **leading European companies in reducing emissions according to a recent study by the Financial Times.**
