PRESS RELEASE

sacyr and ferrovial will expand the aguilas desalination plant (murcia) for €51 million

- **The desalination capacity of this facility in Murcia will reach 70 hm³ per year after investment.**
- **The consortium will operate the plant for a four-year period, extensible for an additional year.**

Madrid, November 3, 2024.- Sacyr Water and Ferrovial, through Ferrovial Construcción and Cadagua, will expand and operate the Aguilas desalination plant in Murcia, for a four-year period, extensible for an additional year. This project is worth €51.5 million and will turn this plant into the second largest in Spain, with a desalination capacity of 70 hm³/year.

This project, awarded by Acuamed, will **increase the facility's daily desalination capacity by 30,000 m³**, so it will be able to treat up to 210,000 m³ of seawater per day. **The Aguilas desalination plant will be the second largest in Spain**, only behind the Torrevieja desalination plant (Alicante), whose expansion is also being delivered by a Sacyr-Ferrovial consortium.

Both parties also delivered the design and construction of the Aguilas desalination plant, which has been in operation since 2013, with the aim of **reducing the overexploitation of the aquifers** in Murcia, as it provides an **alternative water source for the irrigation of crops**.

In addition, this infrastructure has contributed to **guaranteeing the supply of drinking water** for the consumption of the local population in an area of high water stress and at risk of drought.
