NEW ONTARIO SCIENCE CENTRE (CANADA) WINS NATIONAL AWARD FOR INNOVATION AND EXCELLENCE IN P3 PROJECTS

- **Sacyr is involved in the project, which was recognized in the Transaction category for its innovative public-private partnership model.**

Toronto, November 16, 2026. The new Ontario Science Centre in Toronto, Canada, has won the **Gold Award in the Transaction category** at the National Awards for Innovation & Excellence in Public-Private Partnerships. The award recognizes a project that stands out for its innovative public-private partnership model.

Sacyr is involved in the project through the Ontario Science Partners consortium.

A pioneering public-private partnership model

The jury singled out the project's innovative approach: it is the first Infrastructure Ontario project to use the **DBFM Semi-Wide Equity model**. Under this structure, private capital stays committed throughout the **30-year operations and maintenance period**, underscoring Sacyr's long-term commitment to the project.

The award also recognizes the project's **financial innovation and a new way of delivering infrastructure through public-private partnerships**, based on a long-term vision and shared responsibility across the project's entire life cycle. As a result, factors such as durability, energy efficiency and future maintenance needs are built in from the design stage.

It also reflects the ability to manage the complexity of a landmark project tied to **Toronto's major transformation**.

PRESS RELEASE

Ontario Science Partners

The project is being delivered through **Ontario Science Partners**, a consortium in which **Sacyr holds a 26% stake**. The company is also carrying out **50% of the construction** in a joint venture with Amico Design Build.

The future centre will span around **37,000 m²** and will incorporate two historic Ontario Place landmarks, **the Cinesphere and the five Pods**, in a new space for science, innovation and learning.

The project will also seek **LEED certification**, reinforcing its focus on sustainability and efficiency.
